Creation date of this customer information document: 11.12.2022

You are about to buy a product, which is not simple and which can be difficult to understand.

What type of product is it?

Type: UCITS in the legal form of collective trust

Target: The main investment objective of the fund is to achieve long-term capital growth. The fund is actively managed and is not benchmark oriented. To achieve its objective, the fund invests predominantly at least 51% of its assets directly in equities and securities (stocks, stocks with warrants, etc.) issued by companies worldwide. Investors are asked to note that the companies are not selected on the basis of their market capitalization. Thus, as regards market capitalization, the UCITS is entitled to invest in small caps, mid caps, and blue chips (large internationally known companies). The fund is allowed to carry out derivative transactions to hedge its positions or to generate higher returns. Within this framework, the asset manager is at liberty to pick the individual instruments. The proceeds remain in the fund (reinvested) and increase the value of the units. Investors may request the management company to repurchase their units essentially on a daily basis. However, the management company may suspend repurchases if this is deemed necessary due to extraordinary circumstances or under consideration of the investors' interests. The fund is suitable for investors with a long-term investment horizon.

Small investor target group: The present fund is suitable for retail customers, professional customers, and qualified counterparties with the investment aim of capital growth and a long-term investment horizon of at least 5 years who have no or little knowledge of and/or experience with financial products and who can bear high financial losses or even a total loss for reaching their investment goal.

Maturity: Due date: none
Unilateral termination by PRIIP issuer is possible: yes
Automatic termination of the PRIIP: no

What risks are there and what could I get in return?

Summary Risk Indicator

Lower risk

Higher risk

This risk indicator is based on the assumption that you will hold the product for longer than 5 years. If you liquidate the investment prematurely, the actual risk can differ significantly from this and you might receive less in return as the case may be. The total risk indicator helps you estimate the risks associated with this product in comparison to other products. It shows how high the probability is that you will lose money with this product because the markets develop in a certain way or we are unable to pay you out. We have rated this product on a scale from 1 to 7 in risk class 4, where 4 means a a medium risk class.

The risk of potential losses arising from the future performance is classified into a medium. In unfavourable market conditions, it is possible probable that our ability to pay you out will be limited. **Please notice the potential exchange rate risk. You receive payments in EUR so the final return you will get depend on the exchange rate. This risk is not considered in the aforementioned indicator.** This product does not offer any protection against future market developments, so that you might lose the invested capital in full or in part.

The following relevant risks are not considered in the risk indicator:

Liquidity risks: Negative effects in situations where the Fund must sell assets for which there is insufficient demand or only demand at prices that are significantly too low.

Operational risks and depositary risks: The Fund can become the victim of fraud or other criminal acts. It can also suffer losses from misunderstandings or mistakes by employees of the AIFM or a depositary or external third parties. Lastly, its management or the custody of its assets can be affected negatively by external events such as fires, natural disasters or similar.

Risks arising from the use of financial techniques: The Fund can use financial techniques such as derivatives contracts and securities lending to increase the Fund's yield opportunities. These increased opportunities involve increased loss risks.

Performance scenarios

Investment: EUR 10'000				
Scenarios:		1 Year	3 years	5 years
Stress scenario	What you might receive after deduction of the costs	3'790.00	5'790.00	4'020.00
	Average annual return	-62.1%	-16.7%	-16.7%
Pessimistic scenario	What you might receive after deduction of the costs	7'810.00	5'790.00	4'020.00
	Average annual return	-21.9%	-16.7%	-16.7%
Average scenario	What you might receive after deduction of the costs	10'430.00	11'840.00	12'630.00
	Average annual return	4.3%	5.8%	4.8%
Optimistic scenario	What you might receive after deduction of the costs	14'920.00	16'240.00	16'270.00
	Average annual return	49.2%	17.5%	10.2%

The table shows how much you could receive in return in the coming 5 years in different scenarios if you invest in the EUR 10'000. The described scenarios illustrate how your investment might develop. You can compare it to the scenarios for other products. The presented scenarios are consistent with an estimate of the future performance based on previous value developments of this investment; they are not an exact indicator. How much you will in fact receive depends on how the market develops and how long you will hold the investment/product. The stress scenario shows what you might receive in return in the case of extreme market conditions and it does not consider the case that we might possibly be unable to make payment. All costs of the product itself are included in the listed figures, but by no means all costs that you have to pay to your adviser or your distributor, nor the costs of your adviser or your distributor. The listed figures do not consider your personal tax situation, which can also have an effect on how much you receive in return.

What will happen if IFM is unable to make payment?

The assets managed on account of the investors for the purpose of collective capital investment will not be included in the insolvent estate in the event of liquidation and insolvency of IFM Independent Fund Management AG, and it will not be liquidated together with your assets. The assets of the collective capital investment made in securities, which are held by the depositary, will be subject to the right of separation in the event of the depositary's insolvency. These assets of the collective capital investment – except for deposits – will therefore not be included in the bank's insolvent estate in the event of the depositary's insolvency. Any collective capital investment can be transferred to another PRIIP issuer with the agreement of the FMA or it can be liquidated by way of separated satisfaction in favour of the investors.

What costs arise?

Presentation of the costs

The reduction of yield (RIY) shows how the total costs paid by you affect the investment yield that you might receive. The total costs take one-off, running and additional costs into account. The amounts indicated here are equivalent of the cumulated costs of the product with three different holding periods. They include potential contract penalties in case of early exit. The indicated figures assume that you are investing in EUR 10'000. The figures are estimates and can differ in the future.

Costs in the course of time

The person that sells this product to you or advises you on it can charge further cost to you. Should this be the case, the person will inform you about these costs and show you how all costs will affect your investment over the course of time.

Investment: EUR 10'000	If you 1 redeem by year	If you 3 redeem by years	If you 5 redeem by years (RHP)
Total costs	EUR 630.00	EUR 1'330.00	EUR 2'140.00
Effects on the return per year (RIY)	6.3%	4.1%	3.7%

Composition of costs

The following table shows how the different kinds of costs affect the investment yield, which you might receive at the end of the recommended holding period, each year and what the various cost categories include.

One-off costs upon entry or exit		
Entry costs	3.0000% of the amount you pay in when entering this investment. The maximum costs are indicated and you might pay less. The costs for the distribution of your product are included.	300 EUR
Exit costs	0.2500% of your investment before it is paid out to you.	25 EUR
Ongoing costs (taken each year)		
Management fees and other administrative or operating costs	2.0200% of the value of your investment per year. This is an estimate based on actual costs over the last year.	202 EUR
Transaction costs	0.4236% of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the underlying investments for the product. The actual amount will vary depending on how much we buy and sell.	42 EUR
Incidental costs taken under specific conditions		
Performance fee (and carried interest)	The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years. 15% on annual return above 7.5%, in application of the high-on-high-mark principle. No carried interest.	57 EUR

For how long should I hold the investment and can I withdraw money prematurely?

Recommended holding period in years: 5

Based on the risk and yield profile, we recommend a holding period for this product of at least 5 years. However, you can return the product to the issuer toward the next NAV in observation of the notice periods stated in the Fund documents. A premature return can substantially influence the risk and yield profile. In each case, exit costs according to the Fund documents can be incurred.

How can I lodge complaint?

The investors have the option to complain to in case of a management company (the issuer of this product), IFM Independent Fund Management AG, Landstrasse 30, FL-9494 Schaan. The complaint can be lodged by email, fax or in writing and is free of charge for the investor. You can find contact details at www.ifm.li or you can contact us directly at feedback@ifm.li.
